

Comprehensive Adolescent Pregnancy Prevention Program (CAPP)

Beyond “Just Say No”

It's normal for adolescents to experiment and take risks. That is how they learn to be adults. However, when their brain is still developing and they begin to use alcohol and drugs their ability to make healthy decisions in all areas of their lives is negatively affected. Join Stony Brook Children's Hospital's, Adolescent Medicine Physician, Zachary Jacobs, DO in a conversation on how to really help your children control their impulses and understand the risks and consequences of their decisions.

Monday, March 13, 2017

6:30 to 7:30 pm

South Country Family Engagement Center

189 Dunton Avenue
East Patchogue
